PROFESSIONAL SUMMARY

Applied AI and backend developer building end-to-end LLM workflows, evidence-backed retrieval, voice-enabled interfaces, and asynchronous Python services. Focused on reliable AI product features with validation, human review, and deployment-ready architecture.

PROJECTS

PHILIXA - AI Meeting Intelligence MVP for Banking Relationship Managers

FastAPI, PostgreSQL, pgvector, Redis, ARQ, Pydantic v2, faster-whisper, Deepgram, Sentence Transformers, WhatsApp Cloud API, Docker, MinIO, WebSocket | 2026

[Live Demo](#) | [GitHub](#)

- Built an end-to-end meeting-intelligence workflow for pasted notes, audio uploads, and browser microphone input; extracts commitments, risks, client priorities, and follow-up context.
- Implemented economy-model-first extraction with Pydantic validation, escalation to a review model, manual-review fallback, and audit logs for model latency and estimated cost.
- Built evidence-backed client memory using pgvector and Sentence Transformers; semantic retrieval returns meeting dates and snippets for natural-language client questions.
- Engineered a hybrid voice pipeline with browser AudioWorklet/WebSocket capture, local faster-whisper or Deepgram transcription, plus solo and diarized meeting modes to balance privacy, latency, and speaker separation.
- Added a human-in-the-loop client-resolution flow and idempotent Redis/ARQ background jobs for embeddings and reminder delivery, preventing unsafe auto-linking and duplicate actions.

Customer Retention AI System

Python, XGBoost, Scikit-learn, SMOTE, FastAPI | 2025

[Live Demo](#) | [GitHub](#)

- Built and deployed a churn-prediction REST API that returns churn probability, risk tier, and a suggested retention action; documented the interface through Swagger UI.

SAVIOUR - AI Communication Simulator

Python, XGBoost, LLM Integration, NLP Feature Engineering | 2026

[GitHub](#)

- Built a four-step communication-training workflow covering assessment, level detection, live role simulation, and a coaching report with AI-rewritten answers.

TECHNICAL SKILLS

Languages: Python, SQL, C++

AI Systems: LLM APIs, RAG, evidence-backed semantic retrieval, provider routing, prompt engineering, LLM validation & guardrails, Human-in-the-Loop (HITL) workflows, Hinglish NLP

Backend: Async Python, FastAPI, Pydantic v2, SQLAlchemy ORM, REST APIs, WebSocket, OpenAPI/Swagger, Alembic

Data & Processing: PostgreSQL, pgvector, Redis, MinIO, ARQ job queues, background processing

Voice & ML: faster-whisper, Deepgram, pyannote.audio diarization, AudioWorklet, XGBoost, Scikit-learn, SMOTE, Sentence Transformers

Delivery & Quality: Docker, Render, Git/GitHub, pytest, unit testing, httpx

EDUCATION

Bachelor of Computer Applications (BCA) | Suresh Gyan Vihar University, Jaipur | Expected 2027
