PROFESSIONAL SUMMARY

Applied AI and backend developer building end-to-end LLM workflows, evidence-backed retrieval, voice-enabled copilots, and asynchronous Python services. Focused on reliable AI product features with validation, human review, and deployment-ready architecture.

PROJECTS

PHILIXA - AI Meeting Intelligence Beta for Financial Advisors | 2026

FastAPI, PostgreSQL, pgvector, Redis, ARQ, Pydantic v2, faster-whisper, Deepgram, Sarvam TTS, Sentence Transformers, WhatsApp Cloud API, Docker, MinIO, WebSocket

[Live Demo](#) | [GitHub](#)

- Built PHILIXA Beta, a multi-modal, reliability-first AI client-intelligence system for financial advisors that converts meetings into validated client memory, actionable follow-ups, voice-assisted workflows, and context-aware WhatsApp pre-meeting briefings.
- Built four meeting-input modes - paste notes, audio upload, live browser recording, and fast dictation - with dedicated solo and speaker-labeled meeting modes plus client auto-identification.
- Implemented a cost-aware two-stage AI pipeline: an economy SLM handles initial meeting extraction, while ambiguous, invalid, or high-risk outputs escalate to a stronger LLM; added Pydantic validation, manual-review fallback, and latency/cost audit logs.
- Built evidence-backed client memory using pgvector and Sentence Transformers; Philixa Brain is a Siri-like hands-free assistant for client queries, new-client creation, and key workflow control by voice using Deepgram STT, RAG retrieval, and Sarvam TTS.
- Built switchable local faster-whisper + pyannote diarization and Deepgram cloud transcription; used Redis/ARQ idempotent background jobs for transcription, embeddings, and reminder delivery, including WhatsApp pre-meeting briefings with prior context, commitments, and pending actions.

Customer Retention AI System | 2025

Python, XGBoost, Scikit-learn, SMOTE, FastAPI

[Live Demo](#) | [GitHub](#)

- Built and deployed a churn-prediction REST API that returns churn probability, risk tier, and a suggested retention action; documented the interface through Swagger UI.

SAVIOUR - AI Communication Simulator | 2026

Python, XGBoost, LLM Integration, NLP Feature Engineering | [GitHub](#)

- Built a four-step communication-training workflow covering assessment, level detection, live role simulation, and a coaching report with AI-rewritten answers.

TECHNICAL SKILLS

Languages: Python, SQL, C++

AI / LLM: LLM APIs, RAG, semantic search, provider routing, prompt engineering, Hinglish NLP

Backend: FastAPI, Pydantic v2, SQLAlchemy ORM, REST APIs, WebSocket, Alembic

Data & Async: PostgreSQL, pgvector, Redis, MinIO, ARQ job queues

Voice / ML: faster-whisper, Deepgram, Sarvam TTS, pyannote.audio diarization, AudioWorklet, Web Speech API, XGBoost, Scikit-learn, SMOTE, Sentence Transformers

Delivery: Docker, Render, Git/GitHub, pytest, httpx

EDUCATION

Bachelor of Computer Applications (BCA) | Suresh Gyan Vihar University, Jaipur | Expected 2027
